

MILANO GLASS TECHNOLOGIES S.r.l.

CE 1279-5:2005 (09)

The Past and the Present

Milano Glass Technologies S.r.l., reality born as a handcraft company in 1960, named as Vetreria Pavese S.r.l., in a few years it went expanding to become one of the main activities in the North Italy.

The Present and the Future

Milano Glass Technologies S.r.l. offers to Professional Studies a full range of products designed to meet the increasingly modern and demanding design solutions, confirming an ideal partner for professionals and end-users.

Milano Glass Technologies S.r.l. daily challenges design faces, creating strong-image and technologically advanced projects, thanks to a professionally prepared staff and high-processing technology.

Our Products

Milano Glass Technologies S.r.l. includes a whole range of hi-tech insulating glass, which provide sound insulation, solar control and thermal insulation.

- **Sound insulation:** due to the damage to the body which can be caused by excessive noise, the World Health Organization has set at 65 dB minimum threshold for our health. Milano Glass Technologies S.r.l. can provide glasses that guarantee the level of noise reduction to meet the level of performance required.
- **Solar control:** the solar energy intake that we receive at the same time in the form of light and heat sensations can be controlled by using certain types of coated glass (with glass facade treated with metal deposits and/or oxides of metals). Milano Glass Technologies, to meet the needs of the designer, using the most advanced products on the market.
- **Thermal insulation:** Milano Glass Technologies S.r.l. through the use of coated glass and new generation interlayers, produces technical glass low thermal transmission techniques, reflecting the infrared rays with wide wavelength emitted from heated bodies and thereby limit heat dispersion.

Maximum versatility and innovation

The range of solutions that Milano Glass Technologies S.r.l. is able to offer its customers is complete: firstly in addition to providing technical glass with specific characteristics of isolation and control before described, also offers the possibility to unify into a single constructive solution all three of these features (acoustic, thermal and solar). Added to this is the ability to prepare technical glass with anti-injury protection solutions, anti-vandalism, crime-fighting, bulletproof and fire-fighting, as well as the processing/marketing of any kind of monolithic glass.

No problem even for glass sizes: from small areas to buildings of ten thousand square meters. Thanks to the experience gained in these years, Milano Glass Technologies S.r.l. is a valuable support for those designers and architects who have aesthetic solutions and complex implementation details.

Milano Glass Technologies S.r.l. finally delivers with its proven experience customised solutions in line with the design philosophy, employing a wide range of processed products according to the most modern and advanced technologies.

Milano Glass Technologies S.r.l. faces daily great challenges, realizing advanced-image and technologically advanced projects, thanks to a staff professionally prepared and high processing technology.

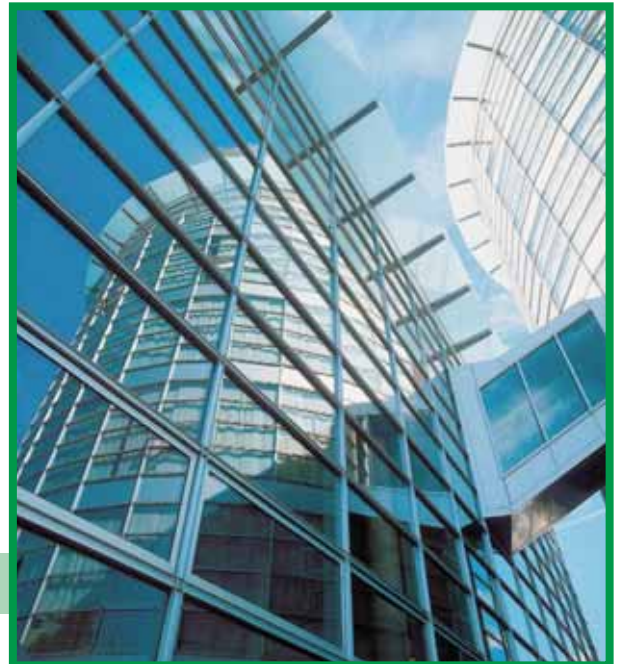

Quality

The high quality of Milano Glass Technologies S.r.l. is certified:  1279-5:2005 (09)
